PCT

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(Chapter II of the Patent Cooperation Treaty)

(PCT Article 36 and Rule 70)

REC'D U 1 SEP 2005

WIPO

PCT

Applicant's or agent's file reference 2003P00796 WO	FOR FURTHER ACTION	
	See Form PCT/APEA/416	
International application No. PCT/EP2004/052750	International filing date (day/month/year) 02.11.2004	Priority date (day/month/year) 31.10.2003
International Patent Classification (IPC) or national classification and IPC G06F17/60		
Applicant SAP AKTIENGESELLSCHAFT et al.		
<p>1. This report is the International preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36.</p> <p>2. This REPORT consists of a total of 7 sheets, including this cover sheet.</p> <p>3. This report is also accompanied by ANNEXES, comprising:</p> <p>a. <input checked="" type="checkbox"/> (<i>sent to the applicant and to the International Bureau</i>) a total of 1 sheets, as follows:</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> sheets of the description, claims and/or drawings which have been amended and are the basis of this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions). <input type="checkbox"/> sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box. <p>b. <input type="checkbox"/> (<i>sent to the International Bureau only</i>) a total of (indicate type and number of electronic carrier(s)), containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions).</p>		
<p>4. This report contains indications relating to the following items:</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Box No. I Basis of the opinion <input type="checkbox"/> Box No. II Priority <input type="checkbox"/> Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability <input type="checkbox"/> Box No. IV Lack of unity of invention <input checked="" type="checkbox"/> Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement <input type="checkbox"/> Box No. VI Certain documents cited <input type="checkbox"/> Box No. VII Certain defects in the international application <input type="checkbox"/> Box No. VIII Certain observations on the international application

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/EP2004/052750

Box No. I Basis of the report

1. With regard to the language, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.
 - This report is based on translations from the original language into the following language , which is the language of a translation furnished for the purposes of:
 - international search (under Rules 12.3 and 23.1(b))
 - publication of the international application (under Rule 12.4)
 - international preliminary examination (under Rules 55.2 and/or 55.3)
2. With regard to the elements* of the international application, this report is based on (*replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report*):

Description, Pages

1-31 as originally filed

Claims, Numbers

¹ received on 13.07.2005 with letter of 05.07.2005

Drawings, Sheets

17-77 as originally filed

a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing

3. The amendments have resulted in the cancellation of:

- the description, pages
- the claims, Nos.
- the drawings, sheets/figs
- the sequence listing (*specify*):
- any table(s) related to sequence listing (*specify*):

4. This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).

- the description, pages
- the claims, Nos.
- the drawings, sheets/figs
- the sequence listing (*specify*):
- any table(s) related to sequence listing (*specify*):

* If item 4 applies, some or all of these sheets may be marked "superceded."

Re Item V

**Reasoned statement with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement**

Reference is made to the following document:

D1: EP-A-1164519

Article 33(3) PCT

1. Claim 1 is directed at a method of administrative nature, i.e. a method for processing of invoices.

Claim 1 defines the administrative steps underlying the processing of invoices, i.e. to select an invoice according to some selection criteria in order to prioritise the cash collection of outstanding invoices (see also p. 1, line 30 - p. 2, line 4; p. 3, lines 8 - 27; p. 9, lines 27 - 33).

The examiner acknowledges that the subject-matter of claim 1 has technical character in that a method is implemented in a computer system. However, the administrative method itself remains a method for which the International Searching Authority is not required to search an international application since it is directed to a mental act (Rule 39 (iii) PCT; Article 17(2)(a)(i) PCT).

It is noted that throughout the entire application as filed there is no hint of any solution to any technical problem and the only aspect of the application that confers a technical character to the subject-matter of the application is the need for technical consideration with regards of the implementation of the administrative procedure in a computer system.

2. A claim comprising a mix of both technical and non-technical features requires an examination of the technical character of the claim in order to determine those features that are relevant for assessment of inventive step.
3. Non-technical features may be considered as features that do not contribute to the

**INTERNATIONAL PRELIMINARY
REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.
PCT/EP2004/052750

technical character of a claim. Such non-technical features must satisfy the following two requirements:

- (i) A feature or group of features that, considered independently from the group of remaining features of the claim, define subject-matter which falls under Rule 39 PCT.
- (ii) A feature or group of features that does not combine with the group of remaining features of the claim in a way such that the new combination of features has a different technical character to that of the group of remaining features of the claim when considered on its own.

4. It is clear that claim 1 is of technical character in so far the subject-matter of the claim is directed to the computer implementation of an administrative method/ mental act (see item 1).

- a. The administrative method/ mental act (i.e. the non-technical features) of claim 1 is defined as a method for processing of invoices, which a company has presented to two or more customers comprising:
 - selecting from a plurality of data records comprising invoice data of said invoices such data records, which are due within a preselectable time or on a preselectable date and the entry of the balance field of which is larger than a preselectable first value, and
 - assigning a first state to said selected data records according to predefineable conditions,
 - presenting the data records invoices having a certain first state.
- b. The method defines an administrative method or a purely mental act. Mental acts fall under the list of exclusions provided in Rule 39 PCT. The features of the method do not combine in any way with the group of remaining features of the claim (general purpose computer system) to alter the technical character of the claim from that of a general purpose computer system. Therefore the group of features set out in 4a above are considered to be non-technical.

**INTERNATIONAL PRELIMINARY
REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.
PCT/EP2004/052750

- c. The technical character of the claim resides in the implementation of the mental act in a general purpose computer system (cf. p. 6, lines 7 - 11).
- d. The closest prior art is therefore considered to be a general purpose computer system comprising a plurality of general purpose computers and a computer network. Such a general purpose computer system was well known before the priority date of the application (31.10.2003) as not to require written evidence.
- e. Features which cannot be seen to make any contribution, either independently or in combination with other features, to the solution of a technical problem are not relevant for assessing inventive step. The administrative method/ mental act described in 4a above is therefore not relevant for assessing inventive step. The method may therefore be described in the problem to be solved and is considered as a non-technical specification that is provided to the person skilled in the art of data processing such that the skilled person may provide an automated version of the method.
- f. An objective technical problem to be solved may be considered as how to implement the administrative method/ mental act described in 4a in a general purpose computer system.
- g. Implementing administrative functions or functions describing mental acts through standard programming techniques into a general purpose computer system is a typical task carried out by the person skilled in the art of data processing. Thus, the skilled person presented with the above problem and the requirements specification would solve the problem by providing all functions described in the requirements specification through use of standard programming techniques (such as representing an invoice and its plurality of data records in the form of an electronic data structure comprising various data fields; assigning a state to a data field e.g. for identifying said record in a subsequent retrieval step) and would thus arrive at the subject-matter of the claim 1 without making an inventive step. The claimed technical solution does not go beyond the concept of a mere automation of constraints imposed by the administrative procedure (Article 33(3) PCT).

REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.

PCT/EP2004/052750

5. Further Observations re. Inventive Step

- a. The application as a whole does not disclose any particular implementational details of the data processing operations at the computer on the network or within the computer system which might indicate that the claimed invention involves any non obvious technical considerations or provides any non obvious technical effects. This applies in particular to the generation of data structures for the purpose of representing the data records of an invoice in a form suitable for automated data processing within a general purpose computer system. The implementation of the invoice data records into such a data structure merely requires standard programming skills.
- b. Should written evidence be required the applicant is referred to D1 (para. 9) which exemplifies a general purpose computer system.

What is claimed is:

1. A method for computerized processing of invoices, which a company has presented to two or more customers, within a computer network, comprising:
 - 5 - automatically selecting from a plurality of data records comprising invoice data of said invoices such data records, the entry of a due date field of which is within a preselectable time or on a preselectable date and the entry of the balance field of which is larger than a preselectable first value,
 - automatically assigning a first state to said selected data records according to predefineable conditions, the first state being represented by an entry in a respective data field of the data record of the respective invoice, and
 - 10 - automatically presenting the data records having a certain first state to a network computer.
